

DEVIA Firebase ERD - Trips and Questionnaires

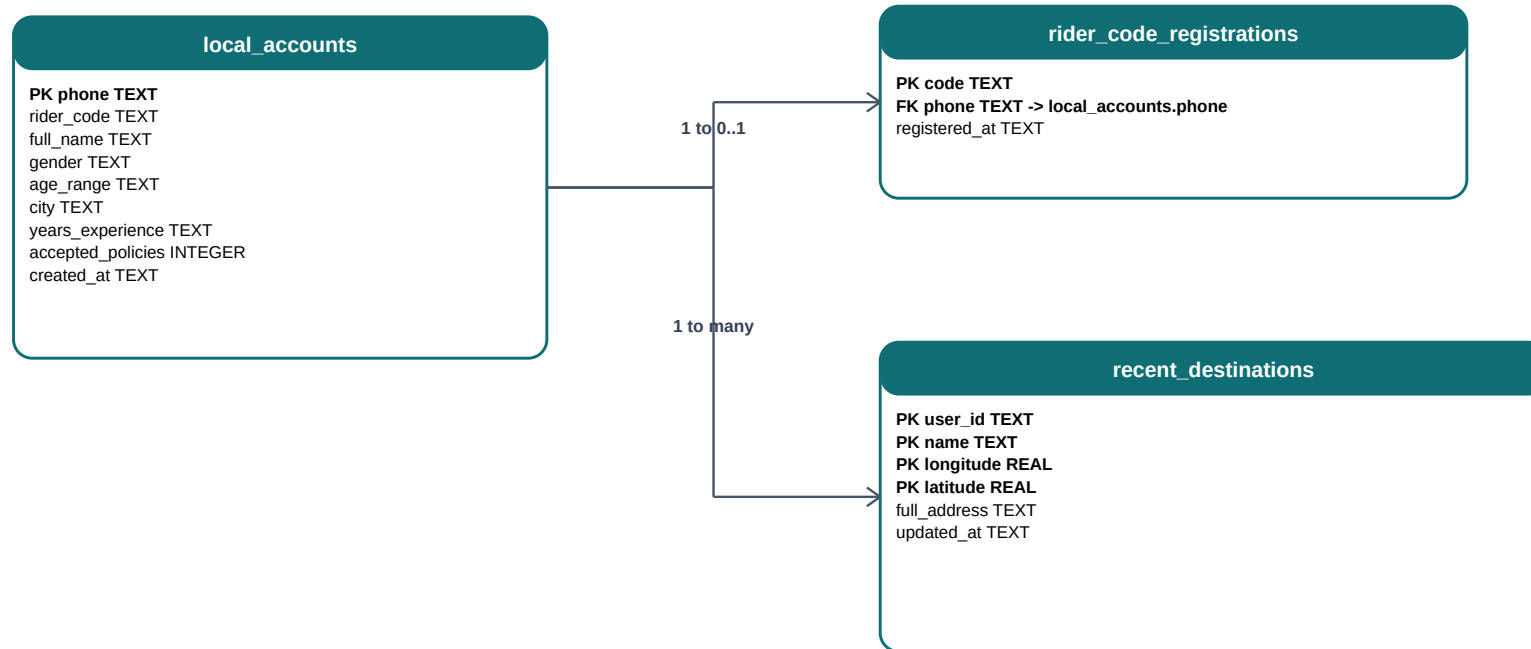

Recommended backend ERD for recorded trips, post-trip questionnaire, detected deviations, and deviation follow-up answers.

Notes: Completed rides should always exist in rides/{rideId}, even when deviationCount is 0. Create deviations/{deviationId} only when actual route deviations are detected. Store canonical answer values even when Tagalog labels are shown.

DEVIA Current Local SQLite ERD

Current on-device SQLite schema used by the app for local account, rider-code, and recent destination persistence.

Note: Questionnaire answers are currently persisted locally through app state storage and should be mirrored into the Firebase ERD on page 1 for backend reporting.
